

Sentinel

PRIVACY GUARDIAN

STEP 01 OF 03

Your network is talking

Every connected device announces itself on the network. One sweep reveals the cameras and drives that should not be there.

Continue

STEP 02 OF 03

Cameras hide in plain sight

A lens the size of a pinhead can sit inside a clock, a smoke detector, or a charging brick. Sweep every room with the IR camera before you settle in.

Continue

STEP 03 OF 03

Trust the magnetic field

A camera's lens and circuitry give off a faint magnetic signature. Sweep slowly — the reading spikes as you get close.

Safety Tips

Learn what to check in a new room

Safety Tips

What to check in a new room

01

Hotel room check

Scan the smoke detector, alarm clock, and TV bezel first — they hide lenses best.

02

Rental & Airbnb

Check mirrors for two-way glass, and look for objects positioned to face the bed.

03

Changing rooms

Hooks, hangers, and vents are common spots. A quick IR sweep takes seconds.

Sentinel Pro

Your private guardian, every day

CONFIDENCE

92%

Why we flagged it

An open RTSP port plus a Hikvision vendor signature matches a 2018 firmware IP camera.
